Bogie designs - SKF

Bogie designs Today, the majority of railway vehicles are equipped with bogies that contain mostly two axles, but in some cases, such as heavier and powerful locomotives, 3-axle designs are used Because of the shorter axle distance of bogie designs, longer vehicles/vehicle sections can be used On the other hand, the riding comfort of bogie

REAL CONDITIONS. REAL SOLUTIONS. SKF Reliability Systems

to overcome SKF took a positive approach to the problem and proposed new designs, using heavy duty spherical roller bearings along with adaptation and re-use of existing bogie components where possible, to give the best all-round solution After tests on site, SKF and BRE engineers determined that the inner bogies were carrying three-quarters of
